

didactix

Roomie Offer 2025

www.didactix.pl

We believe in technology, development, functionality and innovation

Modern technology profoundly impacts every aspect of our lives. The key is not to avoid it, but to harness it smartly – making it a tool for learning, play, therapy and work.

Didactix proves that technology and education can go hand in hand – inspiring children to learn, supporting teachers in their mission and helping parents engage their children in meaningful educational and therapeutic activities at home.

Driven by our passion and backed by professional experience, we were among the first to design proprietary solutions in digital education and rehabilitation. Our work brings together unique experts – educators, therapists, and IT specialists – united by a mission to create purposeful, impactful tools.

We design, build, and implement our own technologies – delivering multimedia products that unlock new, powerful interactive experiences with outstanding quality and value.

“In no other job have we ever spent so much time playing – and calling it work.”

What do experts say about Roomie?

„Using FlySky and Roomie interactive devices in education and therapy exemplifies a modern, holistic approach to learning. It stimulates curiosity, develops logical thinking, and creates aesthetic experiences. Integrating interactive applications into the learning process is a simple way to deliver rich experiences under the guidance of a teacher and within group collaboration.”

PhD Barbara Bilewicz

Research and teaching staff at the Institute of Pedagogy, Maria Curie-Skłodowska University in Lublin. Publishes and conducts innovative research in STEAM education and preschool pedagogy based on the ideas of Friedrich Froebel.

„Multimedia interactive devices like FlySky and Roomie support therapists and educators in their daily challenges. The applications meet all the essential requirements for creating engaging and suitable environments for children with special educational needs (SEN). They also allow for personalized therapy plans and measurable therapeutic progress.”

PhD Agnieszka Masny

Linguist and speech therapist, university lecturer, owner of a private speech therapy center, and science communicator.

Who are our devices for?

Schools, Preschools, Nurseries, Libraries, Common Rooms

Children engage all their senses while using the Roomie interactive device. Learning becomes joyful and highly effective through movement and play. Carefully designed games foster curiosity, discovery, and a love for learning — turning every activity into an immersive educational adventure.

P.E. Classes, Gyms, Swimming Pools, Sports Clubs

Our movement-based apps improve motor skills, coordination, and spatial awareness. They enable creative sports activities and sustained engagement thanks to personalization, gamification, and motivation grounded in autonomy and social connection — factors proven to increase physical activity and group participation.

Hospitals, Sensory Rooms, Therapy Centers, Rehabilitation Clinics

Therapeutic play releases tension and helps patients overcome limitations. With immersive games, children focus on joy instead of barriers — opening up to therapists and peers. Roomie — supported rehabilitation brings enthusiasm and satisfaction to both patients and caregivers.

Why choose Didactix interactive learning devices?

Validated by experts

All our products are developed in collaboration with pedagogical universities. This ensures not only technical excellence, but also educational value aligned with the latest child development and teaching standards.

Polish company with expertise

We are a reliable partner with many years of experience in the educational technology market. We provide end-to-end solutions – from hardware to dedicated software – ensuring full compatibility and consistent reliability.

Android integration

All devices may have access to **One Technology**, which allows screen sharing from and Android tablet. You can launch your own education apps, videos and resources directly from Google Play.

Seamless interactivity

Our unique screen-sharing technology makes it easy to engage students in interactive lessons – quickly, wirelessly, and without messy cables. Available only with **One Technology**.

Always up to date – no internet required

Our devices support easy and fast updates of educational applications – even offline. This is ideal for schools and preschools with limited internet access or IT infrastructure.

Built-in web browser

Access websites, online chess games, learning platforms, and even create your own interactive quizzes – all from the built-in browser operated via touch or interactive pens.

What do you gain by choosing our devices?

FlySky Interactive Floor – Learning in motion

- **Brightest image on the market** – minimum 3600 ANSI lumens, perfect visibility even in well-lit rooms.
- **High-definition projection** – resolution of at least 1280 × 800 for crisp and vibrant content.
- **Ideal for language learning** – purpose-built applications make vocabulary acquisition fun and effective.
- **Largest projection area available** – more space for active learning and group participation.
- **Digital image correction** – perfect screen alignment regardless of surface or angle; easiest installation and setup on the market.
- **Flexible and mobile** – switch between ceiling-mounted and mobile setup with the GO stand; intuitive to move and operate.
- **Proven educational & diagnostic tool** – effectiveness tested in real learning and therapy environments.
- **Exclusive Android app access*** – only Didactix devices allow you to run Google Play games by connecting to an Android tablet.

Roomie Interactive Wall – Unlimited possibilities

- **Multisensory interaction** – respond using touch, IR pens, soft balls, or even laser guns – all senses engaged.
- **Touch-enhanced hybrid mode** – the only educational product that combines wall and floor interactivity in one device.
- **Full internet browser access** – unique among interactive walls and floors: touch and pen-operated web browsing built-in.
- **Unmatched versatility** – more ways to interact than any other solution on the market.
- **Scientifically validated** – recognized as an educational and diagnostic tool in multiple therapeutic contexts.
- **Digital image correction** – perfect screen alignment regardless of surface or angle; easiest installation and setup on the market.
- **Proven educational & diagnostic tool** – effectiveness tested in real learning and therapy environments.
- **Exclusive Android app access*** – only Didactix devices allow you to run Google Play games by connecting to an Android tablet.

*available only with **One Technology**

Classic Series

Roomie Extra / Premium

Roomie is an **interactive wall with floor functionality** – a versatile educational and therapeutic device that combines learning, play, and development for children at various educational stages. The device is equipped with a **lamp-based projector**. Its compact design eliminates the need for permanent installation, allowing it to be easily moved between rooms.

Roomie is available in two versions. **The Extra version includes over 340 applications. The Premium version offers more than 500 applications. Both were created to meet the everyday needs of nurseries, preschools and primary schools.** Roomie devices offer a built-in web browser, giving users access to thousands of free educational resources – including platforms such as **Genially**, which allow teachers to create their own interactive quizzes.

In addition, the functionality of Roomie can be expanded with **One Technology***, which – together with a **Samsung** tablet – enables access to the Android ecosystem and your own applications. The shape and size of the projected image can be adjusted digitally in just four clicks using the interactive pen – a solution available exclusively in Didactix IT devices.

One Series

Roomie One

Roomie One is a mobile 2-in-1 device that combines an interactive wall and floor in a single unit. The built-in **laser projector** ensures a bright, sharp image even in challenging lighting conditions.

Roomie One includes over 500 ready-to-use applications that support education, therapy, motor development, and the overall growth of children across a wide age range – from nurseries to primary schools.

Thanks to the integrated **One Technology** and the **included Samsung tablet**, Roomie One offers full synchronization with the Android system and access to educational apps and games from Google Play – while still maintaining full access to all Didactix IT resources. Roomie One also features complete digital image correction, allowing the user to easily adjust the image's size, angle, and position to match the room setup – with no need for perfect placement or wall mounting.

* A detailed description of One Technology can be found on **page 09**.

Roomie

Mobile device with the functions of wall and interactive floor in one

Unit weight: 25 kg

Device dimensions: 68 x 36 x 38 cm

Number and type of connectors: 2 x USB 3.0, 1 x HDMI, 1 x RJ45

Standard set includes:

- Roomie interactive device
- Remote control (2 pcs)
- Network card
- Power cable
- Dedicated set of balls (42 pcs)
- Laser guns (2 pcs)
- User manual
- Warranty card
- Accessory bag

One Technology – full two - way synchronization with the device, Android access and Samsung tablet provided!

One Technology allows you to project content from a Samsung tablet directly onto the interactive device and control it in real time – using touch, an interactive pen, a laser gun, soft balls or the tablet itself.

The image on the tablet and the projection surface is always perfectly synchronized: any action performed on the tablet is instantly mirrored on the projected screen, and every interaction with the projection is simultaneously reflected on the tablet.

One Technology unlocks full access to the Android ecosystem – thousands of educational apps and games from Google Play, multimedia resources, websites, and tools commonly used in educational and therapeutic settings. Using popular apps like Kahoot, Duolingo, and many others becomes seamless: launch the app on the tablet, and it immediately appears in its full interactive form on the device.

Availability of One Technology

In devices from the **One Series** (Roomie One), One Technology comes fully integrated. The interactive device is delivered together with a Samsung tablet, ready to use straight away.

In the Classic Series (Roomie Extra / Premium), One Technology is available as an optional upgrade. The package includes a Samsung tablet ready for immediate use with the device.

Application packages included with every Roomie device

Logic Games package

This package includes a variety of challenges, from classification tasks to classic games like tic-tac-toe and sudoku. Children can develop their skills while enjoying dynamic and engaging gameplay.

ABC - Book package

This colorful and friendly environment helps children learn the alphabet and numbers in a fun and accessible way. Kids can interactively explore letters and digits and even form simple words, developing both language and basic math skills.

Ecology package

In these interactive applications, children embark on eco-adventures, engaging in physical activities that promote environmental awareness. Through active play, they learn about sustainable living, environmental care, and recycling.

Music package

Music package offers six unique applications that take music learning to a whole new level. In the piano game, children become little virtuosos, exploring different keys and composing melodies. Drum and rhythm games offer a burst of energy and allow kids to create their own musical compositions while improving coordination and focus.

Nursery package

Designed especially for the youngest users, this package inspires movement and physical activity in a joyful and engaging way. Children improve their motor skills while discovering colors and sounds. Crawling across interactive boards, they explore a colorful world full of surprises.

Motor Activity package

This application package features activities like jumping, object catching, and exciting adventures. These interactive experiences not only entertain, but also build motor skills and coordination.

SEN – ASD package

This package offers a uniquely tailored approach to task design, carefully adapted to individual needs. Activities are structured across multiple difficulty levels and draw from participants' real-life environments, experiences, and personal interests. The progressive complexity of tasks supports the gradual development of communication skills and social competencies.

Interactive Backgrounds package

These applications invite children to play by catching or dispersing objects like leaves, colorful balls, inflatable toys, or sweets. The package also includes sensory simulations like thunderstorms or realistic water effects. One highlight is "Abstract Painting," where children can create their own digital artwork.

Sports package

Hit the field in the soccer app and score goals like a pro or head to the rink in "Hockey" for fast-paced matches. Try your strength in "Rope Pulling" and test your endurance. Looking for a real thrill? "FlySky World Cup" lets kids step into the shoes of their favorite team.

Cosmos package

Each game in this package is a gateway to new worlds, where you'll uncover various aspects of cosmic mysteries. From defending rockets against destructive meteors to manipulating spatial equations, every game presents a unique challenge – all united by a shared fascination with space. As an explorer of cosmic secrets, you'll journey through the Solar System and into the farthest corners of the Universe.

Math package

This package offers engaging challenges that develop math skills in a clear and fun way. Children can practice addition and subtraction through interactive games that strengthen their understanding of math fundamentals.

Puzzle package

This package includes classic memory games, sound-matching tasks, and rhythmic challenges. Perfect for developing concentration and memory while making learning enjoyable.

Animals & Nature package

This package includes a wide range of activities – from classification tasks to classic games like tic-tac-toe and sudoku. Children not only enhance their skills but also enjoy dynamic, animal-themed gameplay.

Coloring Books package

These applications give children a wonderful opportunity to express themselves through drawing, coloring, and creating their own artwork. With the help of the interactive pen, kids experience the joy of creation while improving their fine motor skills. The games in this package inspire creativity and support the development of writing skills.

Intro to Coding package

These applications introduce kids to coding by creating sequences and solving logic tasks. They support analytical thinking, cause-effect reasoning, and problem solving – all through interactive and creative play.

Elements package

This set includes applications such as "Sea," "Stars," "Clouds," "Storm," "River" and "Pond." Each of these lets children interactively explore natural phenomena and the elements. We recommend using these applications to discover and understand the mysteries of nature.

Mapping package

These applications take children into the world of mapping, symmetry, and replication. With a variety of tasks, they develop spatial reasoning, analytical thinking, and planning skills.

Sports Wall package

Step onto the field in the "Penalties" app and become a master of goal scoring. Take on the challenge with your friends and try your hand at "Bowling" or "Basketball", test your aim in "Dunk the Luck" and compete for the highest score in paintball.

IR Pen package

This package includes a wide variety of tasks – from classification exercises to classic games like tic-tac-toe and sudoku. Children not only sharpen their cognitive skills, but also engage in fun, fast-paced activities.

Coding 1 & 2 package

In the applications included in Coding 1 & 2 package, children create sequences and solve tasks that develop analytical thinking and cause-and-effect reasoning. Learning to code translates into problem-solving skills and creative thinking. The packages have been enhanced with new applications that further support logical reasoning and digital literacy.

Adventure package

This package takes kids on exciting journeys through unique environments. Race through thrilling tracks, discover animal silhouettes, launch into space among rockets and meteors, or explore the depths of the ocean. It includes treasure hunts and underwater adventures for a complete exploratory experience.

Additional application packages

SEN package - Detective Riddle and a Family Quest with methodological guide (ages 3–16) 🍎🍌

This application package consists of six advanced interactive games forming a therapeutic program designed for compensatory, corrective, and therapeutic work with children aged 3 to 16 who are in developmental stages and have Special Educational Needs (SEN). The set includes complex games and applications with proven therapeutic, compensatory, and corrective value, aimed at supporting the multidimensional development of children with SEN. Its primary goal is to support the development of psychomotor functions, enhance visual, auditory, kinesthetic, and proprioceptive perception, build sensitivity to various sensory stimuli, foster integration of perceptual and motor functions, promote socio-emotional growth, and stimulate thinking and reasoning skills.

Math package – Count on the Family with methodological guide (ages 6–12) 👣

This package includes 8 advanced games and applications with cognitive, educational, and therapeutic value. It supports the development of key competencies – especially mathematical, social, and digital skills. The applications aim to enhance logical-mathematical thinking and expand mathematical knowledge through interactive tasks focused on:

- spatial orientation and body awareness
- logical grouping and classification
- counting and calculations
- measurement
- solving real-life problems using mathematical tools
- applying modern devices and technologies

Steer to STEAM package with methodological guide (ages 6–12) ✎

The "Steer to STEAM" program is a scientifically developed educational tool designed for modern teaching and therapy of children aged 6–12. Created in collaboration with Maria Curie-Skłodowska University in Lublin under the guidance of PhD Barbara Bilewicz, an expert in early childhood education and didactics. The program content was the subject of a scientific study titled:

"Steer to STEAM – characteristics and preliminary evaluation of the aesthetic and educational value of the interactive floor application package," confirming its quality and educational potential. The research shows that "Steer to STEAM" effectively supports cognitive and social development.

Language learning packages (ages 3–12) 🗣️ 👣 🍎🍌

Multisensory applications supporting language learning in English, German, French, Portuguese, Spanish, Italian and Ukrainian. Designed for children in preschools and primary schools – also ideal for multilingual groups.

- 12 months

FAQ

1. How is a Didactix interactive device used?

The device projects an interactive image onto a flat surface — either a wall or floor. Users interact with it directly using their hands, feet, IR pens, interactive balls, laser pointers, or mobile educational robots. Operation is intuitive and requires no prior training.

2. What are the key differences between Classic and One Series devices?

Classic Series devices come with a **lamp-based projector**, offering very good image quality at a competitive price. These are proven educational solutions — available in both stationary and mobile versions — with full access to Didactix software and application packages.

One Series devices feature a **laser projector** for significantly higher brightness, vivid colors, and longer lifespan — ensuring excellent image quality even in bright rooms.

Only the One Series includes **built-in One Technology**, allowing wireless screen sharing from an Android tablet — including games, Google Play apps, and videos. A Samsung tablet is provided with the device.

Both series include full access to Didactix software and apps. In Classic Series devices, One Technology is available as an add-on.

3. What is One Technology? Does it work wirelessly?

Yes. It allows screen sharing from an Android tablet to the interactive device and control it in real time — using touch, an IR pen, or directly from the tablet. This gives you full access to the Android ecosystem and apps available on Google Play, used exactly how you like. The image on the tablet and the device is always perfectly synchronized.

One Technology is delivered together with a Samsung tablet. If you own a device from the One Series (FlySky One or Roomie One), One Technology is already preinstalled on your device, which was delivered along with the tablet. However, if you own a Classic Series device, you can purchase One Technology bundled with a Samsung tablet. One Technology allows wireless or wired interactive sharing of Android tablet content on the projection surface. This lets you display apps, videos, educational games, and websites – without needing an HDMI cable. See how One Technology works in practice and explore its key features – click here:

https://www.youtube.com/watch?v=SFJcC3_DCLQ

4. Can additional application packages be purchased after buying the device?

Yes. Didactix devices allow you to expand functionality with additional application packages at any time. Installation is done remotely, with no need for physical access – so you can activate new content quickly and easily.

5. Are application packages included with the device?

Yes. Every Didactix device – regardless of version – comes with a set of pre-installed application packages. The number and range depend on the version selected. All apps are ready to use immediately after turning on the device, with no additional setup required.

6. Do the devices come with a manufacturer's warranty?

Yes. All Didactix devices include a 24-month manufacturer's warranty, with an option to extend coverage.

7. What is digital image correction and how does it work?

Digital image correction allows you to adjust the shape, size, and position of the interactive image without physically moving the device. Using the dedicated IR pen, simply click and drag the image corners to fit your projection surface. Repeat this for all four corners to achieve the exact shape you need – even in non-standard spaces.

8. Do Didactix devices meet ICT standards in education?

Yes. Didactix devices are fully compliant with Information and Communication Technology (ICT) requirements. They promote modern education through interactivity, access to digital content, and development of key skills in children.

9. Are Didactix devices officially recognized as educational tools?

Yes. Didactix devices are designed as interactive educational tools, and their effectiveness has been confirmed through academic research – including studies conducted by Maria Curie-Skłodowska University in Lublin. All content is developed in cooperation with experienced educational experts.

10. Are Didactix IT devices suitable for children with Special Educational Needs (SEN)?

Yes. Our applications are tailored for children with Special Educational Needs (SEN) – they support communication, emotional development, perception, sensory integration, and motor skills.

11. Is there a “Favorites” folder?

Yes. The device interface includes a “Favorites” folder, where you can save your most frequently used applications and quickly return to them during everyday use.

12. Can I use third-party software?

Yes. Thanks to One Technology, you can use any Android-compatible apps and games, even those not included in the Didactix library.

13. What comes with the device?

Each Didactix interactive device comes with a complete set of accessories so you can start working right away. There's no need to purchase anything separately – the system is ready to use out of the box. Take a closer look at what's included in the Roomie set:

Roomie

14. Do I need internet access to operate the interactive device?

No, our devices do not require internet access to function.

However, it is useful if you want to:

- update the device,
- use the built-in web browser or YouTube app,
- use One Technology wirelessly via WiFi,
- install additional application packages remotely.

15. How many users can use the device at the same time?

Didactix devices are designed for small to medium-sized groups. Depending on the type of activity, between 1 and 6–8 users can interact with the device simultaneously.

Didactix applications are designed with the real educational needs of children in mind – from early childhood through the first years of primary school. Developed by teams of experienced educators and therapists, they are tailored for use in nurseries, kindergartens, and primary schools – both in general education and in working with children with special educational needs (SEN).
